

SEEMMO technology focus on computer vision research and product development. As the world's first company to present vehicle feature recognition and the earliest to develop a vehicle feature system and earliest artificial intelligence company with deep learning in China. Seemmo Technology has relied on its comprehensive understanding of users' needs and continuous technological innovation covers intelligent algorithm development and optimization, algorithm transplant and hardware acceleration has unique advantages. SEEMMO offers products and solutions including AI camera, embedded AI box, intelligent video analysis platform and based on the Hadoop big data analysis application platform. Our products had been widely used in public security, customs, border, educations, transportation and government big data fields.

Video structuring platform integration compute vision, vehicle detection, big data technology. it supports video recognition ,storage and processing at real-time. The target including motor vehicle, two-wheeler, three-wheeler, pedestrian feature recognition.
