

TransMicrowave Technology Co., Ltd. (TSMTC)

★The first development and promotion of flat-panel microwave radar in China

★Independent R&d, design and production of microwave radar with mastering the total core technologies

TransMicrowave Technology Co., Ltd. (TSMTC), a high-tech, professional civilian radar manufacturing company, has great strengths in developing microwave radars.

We have our own R&D center and manufacturing base, certificated by Chinese ISO9001 Quality Management System as a high-tech company.

We have core technologies in micro-strip array antenna and integrated microwave system design. Our main technologies also include microwave technology, high speed signal processing, embedded system design, professional algorithm design, software engineering and so on. Depending on our advantages in core technologies, we can provide customized microwave radar designing services and customized radar products for customers.

The speed measurement radars and traffic radars have many high-end product features such as high performance, stability, reliability, and strong environmental adaptability. TSMTC takes a large market share in the field of intelligent transportation at home and abroad.

The current product line includes several kinds of microwave radars applied in intelligent transportation, intelligent security, vehicle active safety, railway information management, and other fields.

TSMTC would like to provide high quality products and service based on our profound technical strengths and scientific management philosophy. TSMTC is determined to shape a famous brand in the field of civilian microwave radars.
